

1Mobility's "Time based Geo-fencing and Email Containerization" made it simple to handle COPE (Company Owned Personally Enabled) devices for a Manufacturing Company.

Client Profile

Industry: Manufacturing
Business: Electronics

Need

Delete corporate data from mobile devices (remotely) when employee or agent leaves the organization

Solution

Mobile Device Management

Geo-Fence

Mobile Email Management

Data Loss Prevention

1Mobility Offerings

- Enterprise Mobility Management (EMM) through consulting, development and managed services
- Data Loss Prevention (DLP) of Mobile Data
- Compliance enforcement and monitoring
- Containerization
- BYOD Management

With COPE model, the end user has more flexibility, but the organization still has control over costs, security, and other areas of potential risks such as legal and HR implications. Corporations can dictate carrier, apps, network connectivity and take advantage of volume purchase, recycling the devices when contract ends as well as minimize the need for IT to manage an overwhelmingly wide range of devices.

Challenge

A manufacturing company employs large field force of Sales and Service Engineers. They use the company owned devices and communicate using corporate emails as well as some publicly available Apps. There have been some data leakages and frauds done through emails, and were identified by the company after customer complaints. Many of the times, the field employees left the job without returning the devices to the company. Company also needed to manage the emails on the device tightly as well as track geo-location of the individuals during work hours for analyzing the productivity and business results.

Solution

Company didn't want to lock down the devices completely, 1Mobility recommended using following solutions –

1. **Time based fence** - During the work hours, certain policies can be applied to avoid unproductive Apps and device features.

About 1Mobility

1Mobility, a global company, offers a cloud based, internationalized and scalable Enterprise Mobility Management (EMM) solution that secures, monitors, manages and supports mobile devices across platforms, service providers and manufacturers.

1Mobility provides an affordable solution, enables over-the-air distribution of mobile applications, configuration settings and security policies to corporate owned or employee owned (BYOD) devices through a central web console.

2. Email Container - 1Mobility provides email container

- Keep Emails encrypted
- Restricts to sending emails to non-corporate domain
- Remotely configure emails
- Enforce secure attachment viewer and many more Data Loss Prevention policies

3. Remotely wipe the data

- 1Mobility monitors the heartbeat of the device. If the device is not reachable for certain period of time, administrators can configure policy to wipe the corporate data.
- Corporate data can be wiped or device can be reset to factory settings on demand.

Results

1. Increased efficiency without compromising security or productivity

The Manufacturing company was able to keep the vision of increased efficiency and productivity through mobility and also take control of the corporate data. The sensitive data and information about the customers on the mobile devices of employees could be easily wiped once they leave.

2. Empower employees to use corporate device for personal use

While company achieves all its objectives for productive use and operational efficiency through mobility, they empower employees by enabling corporate data on the go as well as use the device for personal use in a controlled manner, creating win-win situation.

3. Financial benefits

While company benefitted through volume purchase, was also successfully able to minimize support cost and Apps compatibility requirements. Since the devices are owned by company, the cost of voice and data was controlled. By avoiding distraction during work hours, it added to the bottom line of the company.
